Applications

This solution is more specifically dedicated to mailing houses and large scale organizations - such as banks, insurance companies, state organizations, postal services...

Incoming mail stand alone system for automated scanning; code read logging; image recording.

Applications are:

- Automated recording of return mail not distributed.
- Certification by image recording of destination address of all incoming mail.
- Counting of incoming mail.

Outgoing mail

- In the letter shop, Offline or Inline on inserting machine, the system provides mail quality control, sequence verification, mail detection of duplicate and faulted, integrity control with data base matching.
- In the large scale organizations, the system provides counting and recording with image certification of all outgoing mail.

User friendly

- Networked architecture for local operation and/or remote connection;
- Reduced setup time thanks to the touch screen and 3 click procedure to start operation;
- Compact system.
